

Employee Burnout & Attrition Analysis Report

1. Executive Summary

This report presents a comprehensive analysis of employee burnout, engagement, job satisfaction, and attrition based on the provided dataset and dashboard. The goal is to identify key factors affecting employee performance and retention, and to provide actionable insights for improving organizational well-being.

Key highlights:

- Average Burnout Score: 0.57 (moderate level)
- Average Engagement Score: 2.72 (fair engagement)
- Average Work-Life Balance: 2.76 (slightly above average)
- Average Job Satisfaction: 0.98 (low to moderate)
- Total Attrition: 237 employees

The analysis reveals that burnout and engagement are strongly linked to overtime, job roles, and tenure.

2. Objectives of the Study

- Analyze employee burnout levels across departments
- Understand engagement trends and influencing factors
- Identify drivers of employee attrition
- Evaluate impact of overtime on burnout and work-life balance
- Provide recommendations for HR and management

3. Dataset Overview

The dataset contains employee-level information including:

- Department
- Job Role
- Job Satisfaction
- Engagement Score
- Burnout Score
- Work-Life Balance
- Overtime Status
- Years at Company

Data cleaning was performed to handle missing values, duplicates, and inconsistencies.

4. Key Metrics Explanation

4.1 Burnout Score

Measures employee stress and fatigue. Higher values indicate higher burnout.

4.2 Engagement Score

Reflects employee involvement and motivation at work.

4.3 Work-Life Balance

Indicates how well employees manage personal and professional life.

4.4 Job Satisfaction

Represents overall employee happiness with their role.

5. Department-wise Analysis

Department-wise Engagement & Burnout Analysis			
Department	Average of Burnout_Score	Average of Engagement_Score	Average of WorkLifeBalance
Research & Development	0.59	2.73	2.73
Human Resources	0.44	2.73	2.92
Sales	0.55	2.71	2.82
Total	0.57	2.72	2.76

5.1 Burnout by Department

- Research & Development: Highest burnout (0.59)
- Sales: Moderate burnout (0.55)
- Human Resources: Lowest burnout (0.44)

Insight: Technical roles tend to experience more stress compared to support functions.

5.2 Engagement by Department

- Sales shows slightly lower engagement
- R&D and HR are nearly similar

Conclusion: Despite high burnout, engagement remains stable in R&D.

6. Job Satisfaction Distribution

The distribution shows most employees fall in mid-to-high satisfaction levels, but there is still a significant portion with low satisfaction.

Insight:

- Employees with low satisfaction are more likely to leave
- High satisfaction correlates with better engagement

7. Impact of Overtime

Key Findings:

- Employees working overtime show higher burnout
- Work-life balance decreases significantly with overtime

Conclusion:

Overtime is a major contributor to employee stress and dissatisfaction.

8. Engagement Trend by Tenure

Observations:

- Engagement remains stable during early years
- Slight dip around mid-tenure
- Sharp increase for long-tenure employees

Interpretation:

- Initial motivation is high
- Mid-career stagnation may occur
- Long-term employees regain stability and confidence

9. Engagement by Job Role

- Managers and senior roles show higher engagement (~2.8)
- Operational roles show slightly lower engagement (~2.7)

Insight:

Higher responsibility often leads to better engagement but may increase stress.

10. Attrition Analysis

Total attrition: 237 employees

Key Drivers:

- Low engagement
- High burnout
- Poor work-life balance

- Overtime workload

Departments with higher burnout show higher attrition risk.

11. Correlation Insights

- Burnout $\uparrow \rightarrow$ Attrition $\uparrow$
- Engagement $\uparrow \rightarrow$ Attrition $\downarrow$
- Overtime $\uparrow \rightarrow$ Burnout $\uparrow$
- Work-Life Balance $\downarrow \rightarrow$ Job Satisfaction $\downarrow$

These relationships highlight the importance of employee well-being.

12. Business Implications

- High burnout can reduce productivity
- Attrition leads to increased hiring and training costs
- Low engagement affects team performance

Organizations must prioritize employee wellness to sustain growth.

13. Recommendations

13.1 Reduce Overtime

- Implement workload management
- Encourage flexible working hours

13.2 Improve Work-Life Balance

- Introduce wellness programs
- Promote leave policies

13.3 Increase Engagement

- Provide career growth opportunities
- Conduct regular feedback sessions

13.4 Address Burnout

- Monitor employee stress levels
- Offer mental health support

14. Limitations

- Dataset may not include all external factors
- Self-reported metrics may introduce bias
- Limited time-based analysis

15. Conclusion

The analysis clearly shows that burnout, engagement, and work-life balance are critical factors influencing employee attrition. Organizations that proactively manage these factors can improve retention, productivity, and overall employee satisfaction.

A data-driven HR strategy is essential for long-term success.

16. Future Scope

- Predictive modeling for attrition
- Machine learning-based employee risk scoring
- Real-time HR dashboards
